SUMMARY

Enthusiastic Software Engineer with a strong foundation in programming, and a passion for problem-solving and giving optimised database schemas for complex systems. I believe in solving real-world problems through contribution, collaboration, and leading from the front.

EDUCATION

Bachelor's Of Computer Science

Graduated August 2022

Bahria University, Islamabad

- **Coursework:** Web Development Foundations, Android development, Scripting & Programming, Data Structures & Algorithms, Problem Solving, Databases(SQL, NOSQL).

CORE COMPETENCIES

- Ruby on Rails
- MERN
- Flutter
- Python
- Azure
- Ruby, JavaScript, C++, dart
- Bootstrap, HTML/CSS
- MySQL, NOSQL, MongoDB
- Django
- Git, GitHub
- MVC Architecture
- Technical Documentation
- Wordpress

PROFESSIONAL EXPERIENCE

Devsinc, Islamabad

Aug 2022 - Current

Software Engineer

As a software engineer, I led the development of two projects from the ground up. I crafted the architectural framework for each project, starting with a blank slate. Subsequently, I managed their maintenance with a dedicated team.

- In the initial project, I exclusively utilized Ruby on Rails for both the frontend and backend development. This involved constructing the entire database structure with PostgreSQL, implementing validations, and creating the frontend components.
- For the second project, I took on the backend development using Ruby on Rails, while opting for React for the frontend. I played a pivotal role in building the project from the ground up.
- Throughout both projects, I actively engaged in the code review process for my team members' pull requests. I provided constructive feedback, suggesting better approaches, and ensuring adherence to best coding practices.

DEVSINC

AUG 2022 - AUG 2023

Associate Software Engineer

I secured a position as an associate during my final semester at university based on my success in navigating both technical and non-technical interviews conducted by the company.

- I quickly transitioned through the training phase and was swiftly assigned to a project. Within three months, I autonomously managed the project in collaboration with another developer.
- During the initial stages, I proficiently utilized Ruby on Rails, JavaScript, Bootstrap, CSS, and Tailwind for project development. I also employed various gems such as Devise, Wicked_PDF, Googleauth, and Twilio. Notably, I integrated a calendar feature with event creation, enhancing the project's functionality.

During Bachelors

Freelancer

In my freelancing experience, I took on three different projects. For three of them, I used WordPress and WooCommerce, building websites and implementing e-commerce functionalities. On another project, I delved into the world of modern web development, using React and Firebase. I also tried my hand at mobile app development with Flutter, showcasing my ability to work in different technology areas.

PROJECTS

Assemble - Ruby on rails Framework (<https://assemble.fyi/>)

- A Platform allowing individuals to register as experts and offer paid sessions to users. The platform also features courses by various instructors, enabling users to enroll and attend classes. Implemented separate dashboards for administrators and experts, created for 'Devsinc,' facilitating efficient management. User can meet their celebrities by asking question to them or by have 1 to 1 video call session.

SupportLinc - Ruby on Rails Framework (<https://www.supportlinc.com/>)

- Developed in my workplace, the main goal of the website is to help people with their medical and emotional well-being. We offer advice on various aspects of health, including mental fitness. Users complete a survey to assess their health condition, receiving guidance and immediate consultancy through online courses.

Specialite - Reactjs and Firebase

- Initiated and implemented the public registration process for restaurants to join the app, allowing them to manage orders, confirm orders, and add dishes through a web app dashboard that I developed. Additionally, I created a centralized project dashboard for processing registrations and monitoring all orders and restaurants.

Daycare APP - Flutter

- Constructed four PDF reports for a daycare app, covering meal tracking attendance, a numbered menu form, and an intent menu form.

Umart - Wordpress

- A business website. (<https://umartpakistan.com/>)

Bstore - Wordpress

- A business website. (<https://bstore.pk/>)
